AB The invention relates to the preparation of ultra-high purity 1,2-diaminocyclohexanetetraacetic acid (CDTA) which is essentially free of unwanted metal and metal ion contaminants and its use as a stabilizer for ultra-high purity hydroxylamine compds. used extensively in the production of high premium electronic components. The process for the preparation of CDTA comprising the steps of: (a) neutralizing chloroacetic acid in an aqueous medium with a non-metal amino or hydroxy base compound at < 10°C, (b) reacting the neutralized chloroacetic acid with 1,2-diaminocyclohexane at < 80°C., (c) adding a non-metal amino or hydroxy base, (d) heating the aqueous mixture at < 100°C, (e) filtering the mixture, (f) treating the aqueous filtrate with hydrochloric acid until a precipitate forms, (g) filtering the aqueous filtrate, and (h) recovering CDTA and optionally redissolving the 1,2-diaminocyclohexanetetraacetic acid in an aqueous solution and repeating steps

(c) to (g).

DT Journal  
LA Chinese  
AB The preparation methods of 1,2-cyclohexylenedinitrilotetraacetic acid (DCTA) are discussed in detail when cyclohexadiamine is used as the material, and the effect of reaction temperature, reaction time, the molar ratio of the material on the yield is investigated by the orthogonal design. The optimum reaction conditions are obtained: n(1,2-cyclohexanediamine): n(chloro acetic acid) = 1:6; The reaction temperature is 50°, the reaction time is 7 h. With low costs, mild reaction conditions, this process provides a new method for the deep processing of 1,2-cyclohexanediamine. The performance figures of this product have reached or exceeded the quality standard of the input reagent; the chemical property of DCTA and EDTA are compared by the application test, and the result shows that the quality of DCTA product is reliable and stable and the performance is fine. Thus it can be used as substitution of EDTA in the chemical industry.

AB Tetrad or double-double effect in lanthanide (4f) elements is said to be due to nephelauxetic effect or the change in the inter-electronic repulsion Racah parameters as a result of complexation. A probable role of ligand (or donor atoms) characteristics, in the magnitude of tetrad effect was studied for a series of ligands.

'1-2N' IS NOT A VALID FORMAT FOR FILE 'CAPLUS'
```

The following are valid formats:

```
ABS ----- GI and AB
ALL ----- BIB, AB, IND, RE
APPS ----- AI, PRAI
BIB ----- AN, plus Bibliographic Data and PI table (default)
CAN ----- List of CA abstract numbers without answer numbers
CBIB ----- AN, plus Compressed Bibliographic Data
DALL ----- ALL, delimited (end of each field identified)
DMAX ----- MAX, delimited for post-processing
FAM ----- AN, PI and PRAI in table, plus Patent Family data
FBIB ----- AN, BIB, plus Patent FAM
IND ----- Indexing data
IPC ----- International Patent Classifications
MAX ----- ALL, plus Patent FAM, RE
PATS ----- PI, SO
SAM ----- CC, SX, TI, ST, IT
SCAN ----- CC, SX, TI, ST, IT (random display, no answer numbers;
           SCAN must be entered on the same line as the DISPLAY,
           e.g., D SCAN or DISPLAY SCAN)
STD ----- BIB, IPC, and NCL

IABS ----- ABS, indented with text labels
IALL ----- ALL, indented with text labels
IBIB ----- BIB, indented with text labels
IMAX ----- MAX, indented with text labels
ISTD ----- STD, indented with text labels

OBIB ----- AN, plus Bibliographic Data (original)
OIBIB ----- OBIB, indented with text labels

SBIB ----- BIB, no citations
SIBIB ----- IBIB, no citations

HIT ----- Fields containing hit terms
HITIND ----- IC, ICA, ICI, NCL, CC and index field (ST and IT)
           containing hit terms
HITRN ----- HIT RN and its text modification
HITSTR ----- HIT RN, its text modification, its CA index name, and
           its structure diagram
HITSEQ ----- HIT RN, its text modification, its CA index name, its
           structure diagram, plus NTE and SEQ fields
FHITSTR ----- First HIT RN, its text modification, its CA index name, and
           its structure diagram
FHITSEQ ----- First HIT RN, its text modification, its CA index name, its
           structure diagram, plus NTE and SEQ fields
KWIC ----- Hit term plus 20 words on either side
OCC ----- Number of occurrence of hit term and field in which it occurs
```

To display a particular field or fields, enter the display field codes. For a list of the display field codes, enter HELP DFIELDS at an arrow prompt (=>). Examples of formats include: TI; TI,AU; BIB,ST; TI,IND; TI,SO. You may specify the format fields in any order and the information will be displayed in the same order as the format specification.

All of the formats (except for SAM, SCAN, HIT, HITIND, HITRN, HITSTR,

FHITSTR, HITSEQ, FHITSEQ, KWIC, and OCC) may be used with DISPLAY ACC to view a specified Accession Number.

AB The preparation methods of 1,2-cyclohexylenedinitrilotetraacetic acid (DCTA) are discussed in detail when cyclohexadiamine is used as the material, and the effect of reaction temperature, reaction time, the molar ratio of the material on the yield is investigated by the orthogonal design. The optimum reaction conditions are obtained: n(1,2-cyclohexanediamine): n(chloro acetic acid) = 1:6; The reaction temperature is 50°, the reaction time is 7 h. With low costs, mild reaction conditions, this process provides a new method for the deep processing of 1,2-cyclohexanediamine. The performance figures of this product have reached or exceeded the quality standard of the input reagent; the chemical property of DCTA and EDTA are compared by the application test, and the result shows that the quality of DCTA product is reliable and stable and the performance is fine. Thus it can be used as substitution of EDTA in the chemical industry.
